17 December 1963

MEMORANDUM FOR THE RECORD

25X1A

SUBJECT: Trip Report to [redacted] EG&G

25X1A

25X1A

1. On 10 December 1963, [redacted] and I
[redacted] with representatives of the [redacted]
[redacted] to discuss problems of
locating the HDL PAM HONG-type radar and the [redacted]
[redacted] will discuss
these meeting in a separate memorandum.

2. On 11 December, I spent the morning at the
[redacted] of EG&G with [redacted]. He
reviewed for my benefit:

25X1A

- a. The status of the flight test facilities
- b. The status of the model range facilities
- c. Work priorities
- d. Tasks which cannot presently be pursued
due to lack of engineering talent
- e. Listing of model range facilities
- f. Listing of flight test facilities
- g. EG&G personnel present and anticipated
for Agency work.

b. Summary of total EG&G organization. The
Special Projects box is that portion presently
allocated to Agency work. The attached material
gives more information on these items.

3. As things now stand, [redacted] plans to remain
as Project Manager of the Special Projects group until
about mid-1964. A newly cleared person, [redacted] is
slated to take over his responsibilities. He has a
Master's degree in Electronic Engineering and seems to
be technically competent. He came from STL and, prior
to that, worked at Radiation, Inc. He is more hardware-
oriented than [redacted]. I was not able to judge in

25X1A

such a short contact how well he would do as the Project Manager. Being new [redacted], he listened mostly as [redacted] and others did the talking.

25X1A

25X1A

4. [redacted] indicated that a valiant effort was being made to update their personnel in number and quality. Some mention was made of the possibility of subcontracting for [redacted] personnel. I pointed out that, if this were necessary, Headquarters might consider it desirable to replace EG&G entirely.

25X1A

25X1A

5. In other discussions, [redacted] pointed out that they had access to an [redacted] 1604 computer in [redacted]. With about one-half of an additional rack of equipment, they could make a check-in hours after a run as to whether the run was successful rather than waiting for the tape to be transported to [redacted] for data reduction and analysis. This should be more economical as well as allow the work to proceed more rapidly. I recommend that they be permitted to install the additional equipment required and use the computer facilities for the more routine work. [redacted] could still do the data reduction and analysis in those cases where their talents were needed in more advanced areas of work.

25X1A

25X1A

25X1A

6. [redacted] recommended that someone (probably Lockheed) be directed to make a paper study of various approaches to model-range techniques to get high-angle data. The conclusion of this study should include a recommendation for a particular approach, if one is found. I think this makes sense rather than people trying to invent schemes on the spur of the moment during the course of the project reviews, which are held periodically.

25X1A

7. During the afternoon of 11 December 1963, [redacted] of GE-TEMPO arrived to review the status of EG&G simulator experiments related

25X1D

25X1D

[redacted] I pointed out that the common

scintillation was not realistic, but should include independent scintillation sources.

a. The following schedule was outlined as an objective:

a. Complete the two target simulation data taking on the EG&G simulator in two weeks, followed by the reporting of the data analysis by 23 January 1964.

25X1D

c. EG&G to put equipment and program together to simulate multiple targets against a APOC/N REST radar. Data taking and analysis to be completed by 1 March 1964.
